Reflex IR™ Paint

Product Description

eTime's **Reflex IR™** (infrared reflective) latex paint is a thermally emissive coating for building walls. Reflex IR's high level of nano-metal oxide particles and infrared emissive pigments block ultraviolet rays and reflect infrared radiation, reducing the solar heat penetrating through walls and roof. As a result, surfaces stay cooler and extreme temperature changes that create stress on walls are reduced.

Used on either interior or exterior surfaces, Reflex IR paint reduces energy consumption and costs by lowering air conditioning demand load in the summer and heating energy use in the winter.

Reflex IR is a low VOC, water-based coating that is environmentally-friendly and can be applied on multiple surfaces including concrete, stucco, wood, metal, drywall and composite roof shingles.

Reflex IR's proprietary UV reflective capability ensures that paint colours remain vivid and are long-lasting. The highly durable paint will not flake and can be easily cleaned after application.

- **Excellent emissivity and reflectivity performance:** reflects >85% infrared
- **Preserves walls and roofs:** reduces wall stress and cracking
- **Highly energy efficient:** lowers cooling or heating costs and energy consumption
- **Durable:** weather-resistant, long-lasting, strong surface adhesion and stain-resistant
- **Flexible use:** Tintable* to customized colours, suited for multiple types of surfaces, interior or exterior application
- **Environmentally-friendly:** non-toxic, low VOC, no heavy metals
- **5-Year Warranty:** limited warranty against discolouration, peeling, flaking or cracking
